

Abstract

When an computer fraud against a computer system is detected, data of the computer system is protected.

5 A data protection apparatus protects data in a storage volume in a computer system comprising the storage volume assigned for storing data, a computer for reading and writing data from and to the storage volume, and a storage control unit for controlling communication between the computer and the storage volume. The data protection apparatus comprises an event
10 detection unit for detecting an event occurrence, and a path disconnection unit for instructing the storage control unit to stop communication between the computer and the storage volume.
